

Manufacturing and Administrative Facilities

Hyundai Motor Manufacturing of America – Montgomery, Alabama

Client Benefits

Hyundai Motor Manufacturing of America (HMMA) was constructing a \$1.2 billion dollar automotive manufacturing facility in Montgomery, Alabama. Facing a tight construction schedule and a scarcity of self-perform contractors, HMMA was looking for help. Peregrine was able to provide licensed craft and project management services to complete key areas needed for pre-start-up training.

The Opportunity

When the construction schedule started to slip and the amount of qualified craftsmen available began to diminish, HMMA was concerned about meeting their projected start date for production. Through long established relationships in the construction industry, HMMA learned about Peregrine's construction capabilities and their availability.

The Solution

Peregrine was contacted by HMMA's plant engineering team to bid on critical path work. Peregrine was able to respond quickly and provide the needed craft, management, and administrative personnel to the site. Within the first and second quarter of 2004, Peregrine's projects included:

- Administration Bldg. architectural, electrical, and mechanical work
- Plumbing and HVAC systems on the Stamp and Weld Bldg.
- Plumbing and electrical work on the cafeteria for the Assembly Bldg.
